

P0

Meta: Initializes a best-parent rewrite search, selecting agents by validation accuracy.

P2

Meta: Fixes observation parsing to activate feedback-guided refinement.

P4

Meta: Dropping stale feedback and sampling diverse alternatives when refinement gets stuck.

P1

Meta: Adds Pass@K sampling and local scoring for verifier-guided generation.

P3

Meta: Extends the refinement horizon, allowing more pass/fail feedback before submission.

P5-6

Meta: Explores stronger de-anchoring via task-profile/skeleton prompts and fresh final sampling, but both regress from P4.
